

Catholic Social Teaching

IN OUR CURRICULUM

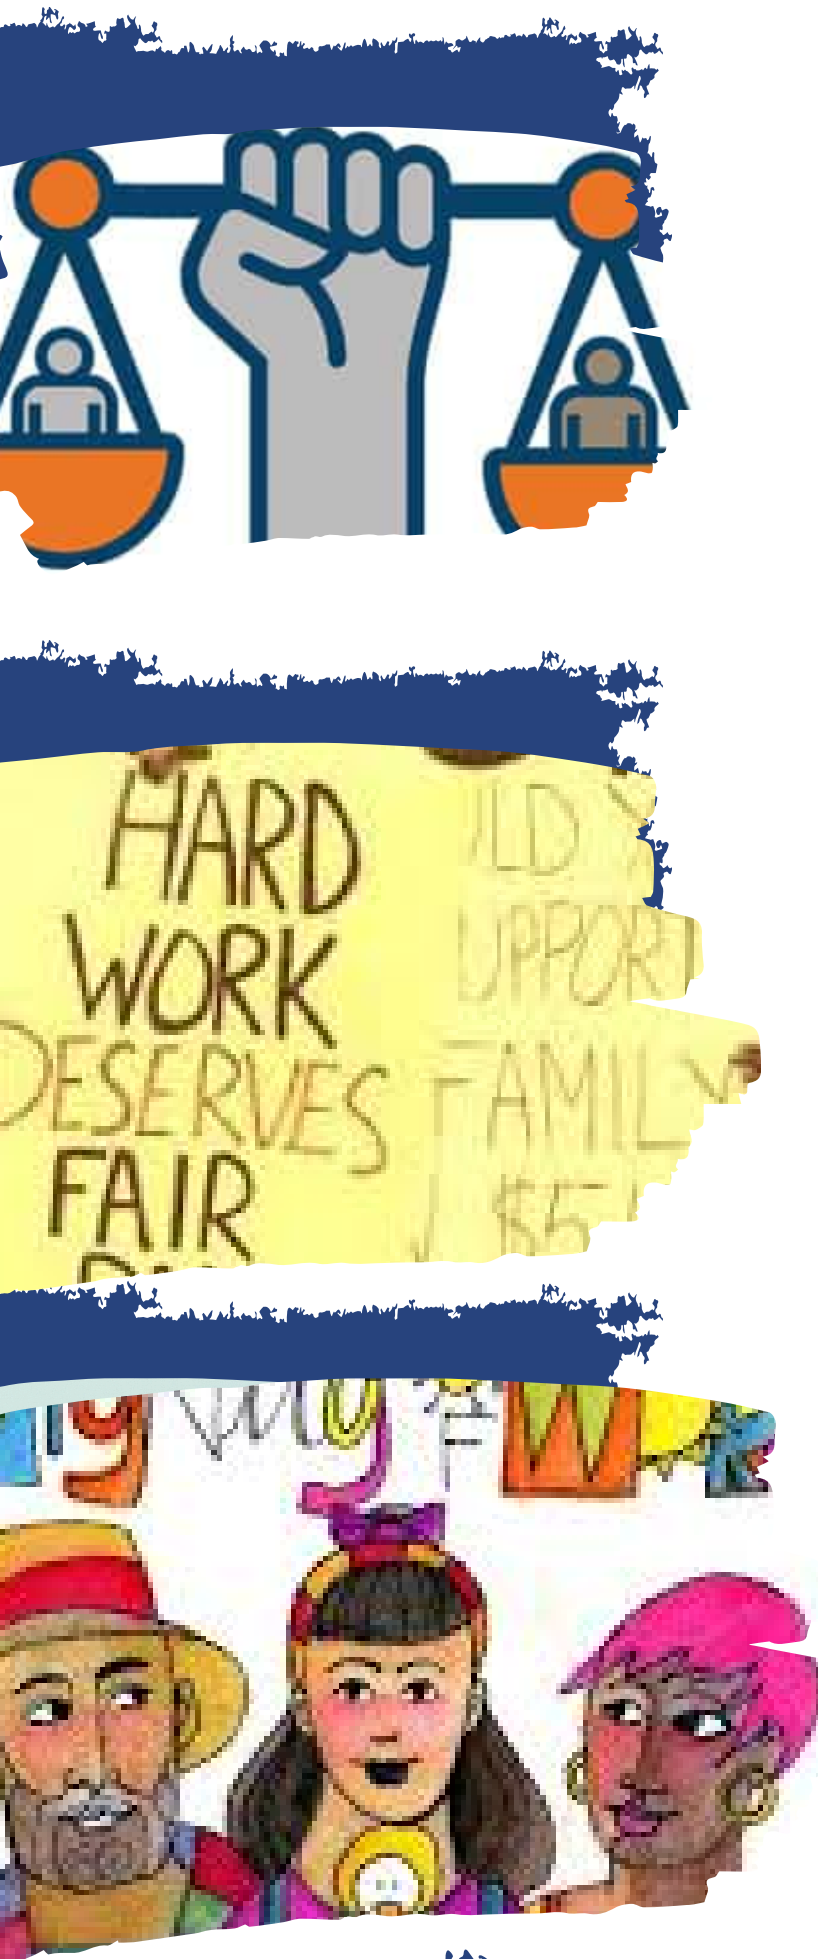

MATHS

DIGNITY OF THE WORKER

Mathematics empowers workers with job skills, advocacy for fair wages, and financial management – therefore promoting dignity. Businesses use maths for ethical stewardship in pricing and resource management, reflecting fair treatment principles. Maths education highlights economic inequalities, aligning with justice and addressing labour injustices, improving conditions.

Maths teaches numerical skills like percentage change, profit, compound interest, depreciation, currency exchange, and value for money. It develops problem-solving, logical reasoning, and data analysis through statistics calculation, graph interpretation, and data comparison, preparing students for diverse mathematical challenges.

Live out our faith...
