# Psychologist

Look for  
command  
words

What are you being asked to do?  
Are you being asked to outline,  
explain, describe, evaluate etc.?  
How should you structure your  
answer?

Look for key  
psychological  
vocabulary

Do you know what all the  
specialist terms mean? How can  
you improve your understanding?

Interpret  
data, charts  
and graphs  
carefully

What is the data showing? What  
can you infer from the data? Is it  
what you'd expect based on your  
psychological knowledge? Is it  
reliable and valid?

Look for links  
with things  
you already  
know

Where have you heard these  
terms or concepts before? Can  
you make links with previous  
topic areas/ approaches? What  
prior knowledge do you need to  
fully understand this?
